

## **Baltimore Harbor and Anchorages Limited Reevaluation Report**

The Baltimore Harbor Anchorages and Channels Project will provide navigation improvements to enhance efficiency and safety, and accommodate current and expected vessels calling on the Port of Baltimore. The improvements will include expansion and reconfiguration of existing anchorages and branch channels and construction of a new turning basin.

In November 2001 the Corps approved a limited re-evaluation report which documents recent design changes and analyzes and confirms the economic merits of the project. The construction start is scheduled for the beginning of 2002 with the project completion in spring 2003.

Additional Information is available at the Baltimore District website:
